This Server Administration course will show you how to configure an adapter server. You will learn techniques for balancing performance and resource utilization using the Server Web Console, debugging and diagnostic tips and techniques, and how to control your server environment on a daily basis. You will also learn how to implement security models to protect and manage privileges based on user role.

You will learn how to:
- Visually and conceptually understand the iWay server architecture
- Navigate the Web Console
- Customize the Web Console appearance, including different languages
- Configure an adapter server
- Manage adapter server operations on a daily basis
- Configure a data source and set up metadata for an adapter server
- Create user and service profiles and learn how to use them
- Understand the role of different configuration files
- Troubleshoot and solve problems
- Tune your adapter server for efficient performance
- Analyze and trace (log) server activity
- Secure the Reporting Server Web Console and manage privileges

You will also review:
- Adding and configuring a remote server
- Adding a server node using the WebFOCUS Client

Who Should Take This Course
This course is for server and application administrators who are working with a WebFOCUS Reporting Server, or an iWay DataMigrator Server.

Prerequisites:
None

Tuition
In U.S. Dollars                In Canadian Dollars
$1800 per student          $1800 per student

Schedule
This course is offered as public Instructor Led Online (ILO) training with regularly scheduled sessions. To schedule a private ILO session, please contact your local Information Builders Education Account Executive.
